

ROLLER SAVER PERFORATING SYSTEM

Height of perforating rule: 23.00mm (0.906").
Thickness of brass impression strip: 0.50mm (0.0205"). Standard width of impression strip: 12 points, but any width supplied on request.
The cutting edge of the perforating rule is below type height and the paper is depressed on to it by the impression strip on the tympan.

This is how the system saves your inking roller

Printers punches

Part of the "Infinity" range, these punches are used with an impression pad as the roller saver perforating system. Punching at the same time as the printing, they can also be used where punching is required as a separate operation.

See separate sheet for cut/shank size details.
